The bin trolley has been specifically designed for handling crates, loading, unloading and harvesting fruit with a single operator. It is ideal for work between the rows of vines, fruit trees, etc.

There are two different versions, one operated by hand and the other a motorized "Energy" version which, thanks to its driving system, can operate on its own with two 24 V electric motors powered by two batteries. It can be supplied with a remote control on request.

"Energy" Electric Bin trolley

Manual bin trolley

The crates can be easily loaded and unloaded by means of a lever.

Owing to its simplicity, the manual version (patented) can be effortlessly used and prevents the product in the crate from being damaged.

BIN TROLLEY IN ACTION **DIMENSIONS**
